Dinner!

For general inquiries, please
contact **Mushtaq Rabbi** at:
mushtaq_rabbi@calgary.ca,
or call: 403.268.4988

In fiscally challenging times, there is a greater emphasis on ensuring value for both money and time spent. There is a great impetus to “do more, but spend less”. Meeting the need for enhanced products, services, or programs on stricter budgets necessitates innovative approaches to project, asset, and risk management.

Value Analysis provides a methodology that can guide these processes towards maximizing value and assist with:

- Optimizing the use of resources by helping decision makers balance key stakeholders needs with resources.
- Achieving buy-in for change by providing a Value Analysis team with a common understanding of key needs and solutions.
- Delivering services and infrastructure under fiscal and staffing constraints. Value Analysis is a structured approach to innovation that reliably generates alternative solutions to problems.

Scheduled sessions include presentations by an impressive array of speakers from across North America on the application of Value Analysis in:

- Infrastructure including Transportation, Water-Wastewater Systems, Waste Management, and Facilities
- Identifying and balancing stakeholder needs
- Portfolio and /or program management
- Achieving value for money in project delivery through alternative financing, procurement and delivery
- Delivering value in service delivery, business processes, information technology, and organizational change management

Who Should Attend?

- Program and Project Managers
- Asset Managers
- Funding Authorities
- Product Developers
- ‘Change’ Managers
- Business Process Owners

The preliminary conference schedule can be reviewed at: http://www.scav-csva.org/whatsnew.php?id=58§ion=events_detail

Final program and registration details will be posted in July on the CSVA website:
